Form 'B' – Assessments of Environmental Effects Application to Discharge Contaminants

Applicant Name: _____

Applicant Name : _____ (from form A, Q1.4)

1. Details of the Changes of Conditions Requested
or NA New consent (move to Q 2)

1.1 **What is the number of the consent you wish to change?** _____

1.2 **Attach a copy of the consent, with annotations showing the changes you are requesting, or state specifically the changes you wish to make below.**

Condition #	Change Requested
_____	_____
_____	_____
_____	_____
_____	_____

_____	_____

Now go through the form and confirm the details of your discharge, as some will change as a result of the change of conditions.

2. DETAILS OF THE ACTIVITY

2.1 **Where will your discharge be to?** Land Air Water
(please tick all those that apply)

2.2 **What are you proposing to discharge?**
Fill/Soil Wastewater (ie. from a winery or processing) Odour Contaminants
Specify what contaminants are: _____
Other *Specify:* _____

2.3 **Describe the operation you are discharging from** (e.g. Truck washdown, Abrasive Blasting)

2.4 **Is the activity in the Coastal Margin?** Yes No

2.5 **Site plan.** Provide a detailed plan of the layout of the proposed site and any associated discharge area that clearly shows the source of the discharge, where/how it is to be discharged, distances from the source to property boundaries, bores, surface water bodies and any other significant features. Please label it clearly, and ensure it has a scale.
Site plan attached

2.6 **Describe the activity.** Provide a detailed description of the operation from which the discharge results, including the volume and/or rate of discharge, details of material discharged, any treatment processes prior to the discharge, duration of the discharge (ie. hrs/day and per week, frequency) and why the activity is being undertaken.
For discharges of contaminated soils – an assessment from a suitably qualified contaminated land expert will be required and should be attached. Details of the testing undertaken on-site and in-situ contaminated soil concentrations in comparison to NES standards is required.

2.7 **Provide details of the contaminants** (a laboratory analysis of the discharge may be necessary if there are no known or manufacturer's information available).

Contaminant details and analysis attached

2.8 **Describe the receiving environment.** For discharges to land, information will need to include details of soil types (e.g. type, permeability), distance to nearby surface water bodies, depth to water table. For air discharges information about other nearby discharges to air, nature of surrounding land use is important. For discharges to water, information about the surface water body into which the discharge occurs is important including estimates of flow, description of aquatic life etc.
