Total Amount:				\$3,783.75	\$567.56	4,351.31

Annual freshwater science charge for discharge consents:

These annual fixed charges are for the costs of performing science investigations and monitoring to manage and inform on effects, or potential effects, on the quality of the region's freshwater resources. Charges for discharge to land or water consents are based on the scale of the consented discharge activity and based on whether the receiving body of the discharge is land or water.

Annual freshwater science charge for watertake consents:

These annual fixed charges are for the costs of performing science investigations and monitoring to manage and inform on effects, or potential effects, on the quantity of the region's freshwater resources. Charges for water take consents are based on the consented weekly volume of take (not actual use) on a tiered rate.

Annual low flows monitoring fee:

This fixed charge recovers the cost of monitoring our low flows in the regions rivers. This is charged to holders of consents to take water, where the abstraction is subject to low flow limits (directly or via gallery intake or wells).

Annual water measuring device admin fee:

These annual fixed charges fund the Water Information Services team and include administration and processing of water meter installation records and water meter data. The fixed charges are set according to the number of meters installed. There is also a small charge for consents that are not being used or are not yet exercised.
