The hapū of Ngāti Pārau have resided in the shadow of Ōtātara Pā and adjacent to the Tūtaekurī River for over 600 years. The hapū has particular concerns regarding the diversion and discharge of groundwater and stormwater treatment pond water into the Upokohino River. The concern is founded in the fact the Upokohino Stream flows into the Tūtaekurī River which is under pressure due to upriver sediment, low river flow, and contamination.

The additional discharge of contaminants into the air with the extension of Area B is of concern to local residents. The community of Waiohiki has expanded with several new papakāinga in the area. The area now permanently houses approximately 700 residents and containing young and aged people. Wind drift of these contaminants in the air may affect these two vulnerable age groups in our community.

The overuse of the landfill site by residents of the Hastings District and Napier City Councils. There has been a huge increase since 2020 in the volume of waste taken to the site. Local residents have also noted the increase of trucks which are sign written with businesses from outside both council boundaries.
