

Tukituki River at Tapairu Road

Peak flow rate per year

During Cyclone Gabrielle, the Tukituki River at Tapairu Rd had **1,805 cubic metres a second of water flowing at its peak**, which is over two thirds of an Olympic size swimming pool of water per second.

Peak flow rate
The maximum amount of water measured in cubic metres flowing past a designated monitoring point.

An Olympic swimming pool filled to 2 metres equals 2,500 cubic metres.
